

ABSTRACT OF THE DISCLOSURE

3

Coating apparatus including

6

a coating vessel including

a vertical wall having

9

a vertical interior surface having a circular cross section and an
imaginary vertical axis,

12

an open top and

15

a bottom,

18

a vertical shaft supported on the bottom of the coating vessel, the shaft having an axis
aligned coaxially with the imaginary vertical axis of the interior surface having the circular
cross section, and

21

a coating liquid inlet / outlet adjacent to the bottom of the coating vessel.
